

STOCK MANAGEMENT SYSTEM

The stock maintenance system will allow the manager to record information of the items available in the store and generate reports based on the total amount of sales to owner.

The new system will have a windows-based desktop interface to allow owners to enter the information of sales, purchase stocks, change employee and manager preferences and create reports.

The system retains information on all the items in the shop. The system retains the records of the cost, expiry date, vendor details, Discount, quantity.

The employee or the inventory maintains the information of the sale of the item. He can add the items at the right time and update the database.

The customer can view the availability of the required items and the price of the items. The customer can just view them but cannot make any changes. The process of stock maintenance system is that the customer logs in to the particular site to place the order for the customer product. The stock maintenance system is described sequentially through steps •

The owner logs in to the particular site.

- They fill the owner details.
- They place the orders for their product.

- The manager logs in and views the customer details and orders
